

Viking Pools...

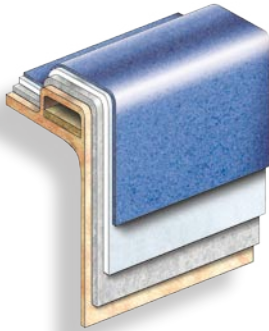

The most built fiberglass pools in the industry

The Viking Advantage

Viking Pools manufactures an impeccable product with unsurpassed service and a lifetime warranty. In addition to various pool styles and sizes, Viking offers more options than any other pool manufacturer with features like perimeter tile, inlaid tile, tile mosaics, Crystite pool finishes, built-in water features like cascades and streams, fiber optic lighting, and in-floor cleaning systems to provide you with a superior pool that compliments your home and your lifestyle. Viking makes owning a pool a lifetime of pleasure and enjoyment.

Four-Layer Construction and Ceramic Core Means Superior Strength

Viking Pools manufactures a superior product that is unlike any other pool in the world. Viking combines premium raw materials and a unique four-stage manufacturing process, known as A.C.P.[™] (Advanced Composite Pool), to create a pool of unsurpassed appearance and performance. With over two decades of research, development, and innovation, Viking builds a pool that leads the industry well into the 21st century.

Viking's state-of-the-art four-layer construction begins with a durable, high-polished mold. The primary application of Gel Coat or Viking's unique Crystite is applied to give the pool a gorgeous, non-porous finish. This smooth finish is non-abrasive to skin and swim wear and is more resistant to algae than other types of pools. Viking's non-porous finish resists the problems associated with unbalanced water chemistry, requiring less chemical maintenance, labor, and electric, saving you time and money. The second

layer is Viking's Vinyl Ester Resin, which is combined with fiberglass to provide the greatest impact resistance and optimum blister protection available. This Viking created formula became the benchmark of the fiberglass pool industry. In the heart of every Viking pool is an exclusive ceramic core layer that adds a greater strength to the pool walls and provides enhanced water resistance. The final stage of every Viking pool is a specially designed resin and hand laid fiberglass.

Viking's pools withstand drastic temperature changes and resist freeze-thaw climates, and Viking is the only pool manufacturer that offers an earthquake warranty. Viking Pools takes great pride in manufacturing a quality product using the latest technology to lead the way in the fiberglass pool industry.

Location, Location, Location

Viking Pools has four manufacturing facilities (Williams, CA; Odessa, TX; Jane Lew, WV; and Oak Hill, FL) and a network of dealers nationwide, making them the only pool manufacturer that can effectively cover the continental U.S. After 28 years of research, development and innovation Viking continues to manufacturer a premium pool that has unsurpassed strength and durability. In addition to being an industry leader, Viking Pools has experienced continuous growth year after year, raising the bar to which all other pool manufacturers are measured.
